Reel GARDENING

Some plants take a lot of nutrients out of the soil, some don't take much at all and others actually give nutrients. In order to ensure that the soil stays healthy we need to make sure that we don't plant heavy feeders after heavy feeders in the same spot, to give the soil a break. This is called CROP ROTATION.

| HEAVY FEEDERS | MEDIUM FEEDERS | LIGHT FEEDERS | GIVERS |
|---|--|--|---|

HOW TO LAYOUT YOUR GARDEN

To get the maximum harvest from your garden you will need 4 garden beds that each have a planting area of 2m². Each garden bed is divided into 4 quadrants to plant 4 different crops. The crops are rotated each month. You will plant 1 garden bed each month.

| PLANT MONTH 1 | CROP 1 | CROP 2 | CROP 1 | CROP 2 | PLANT MONTH 2 |
|---------------|--------|--------|--------|--------|---------------|
| | CROP 4 | CROP 3 | CROP 4 | CROP 3 | |
| | 2M | | | | |
| PLANT MONTH 3 | CROP 1 | CROP 2 | CROP 1 | CROP 2 | PLANT MONTH 4 |
| | CROP 4 | CROP 3 | CROP 4 | CROP 3 | |

If we plant a different garden bed each month this means after 4 months you will be back to planting the first garden bed on month 5. When you plant this bed again the crop in each quadrant will change to create the rotation. This can be seen on the following page with a detailed diagram of which crop to plant in each quadrant month by month.

EACH HOUSEHOLD GARDEN BOX REQUIRES 16M²

2 METERS

2 METERS

| PLANT MONTH 1 | CROP 1 | CROP 2 |
|---------------|--------|--------|
| | CROP 4 | CROP 3 |

2 METERS

JANUARY

| | |
|---------|--------|
| CABBAGE | CARROT |
| SPINACH | TOMATO |

- Total garden needs to have 4 x 4sqm area
- 4 square meters planted each month.
- Month 5 will be planted in area that Month 1 was planted in once Month 1 is harvested. This creates a continuous harvest year round.

2

SEED TAPE.

- 12 envelopes, each marked with month of planting.
- Box is packed according to province of planting so all seed is correct for month of planting in specific area.
- Each envelope has 4 different kinds of vegetables or herbs.
- 15 seed sachets of each so 60 total in each envelope.

Plant vertically with this section below the soil (Depth depends on the variety for optimum germination)

Easy to follow instruction on the actual tape

Seed inside biodegradable, seed tape

720 SEED TAPES IN BOX

3

ECOBUZ BIOLOGICAL SOLUTIONS

- Root Health program at planting
- MultiGro - All in one vitality

4

WATERING SPOUT.

- Each monthly 4sqm gardens needs 2 litres of water a day.
- Water spout screws onto any 2 litre plastic 'coke' bottle. can be placed next to your garden to make watering daily easy and limit wastage
